June 2023

Making an Impact in Your Community

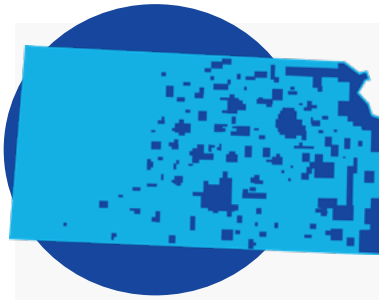

Service is one of our Core Values at Kansas Gas Service, and we're excited to release our 2022 Foundation Impact Report. Last year, ONE Gas, our parent company, invested nearly \$2.5 million in our communities across Kansas, Oklahoma and Texas through ONE Gas Foundation grants, public school funding, matching grants and United Way donations. The giving didn't stop there! Employees volunteered more than 5,800 hours across our operating areas at local nonprofits.

Community Spotlights

In Kansas City, we worked with **Habitat for Humanity** to support weatherization efforts and provide natural gas furnaces to families as part of their **Home Preservation Program**.

In Topeka, we awarded a grant to the Family Service and Guidance Center to expand their **Youth Crisis and Recovery Center**. The grant will fund natural gas boilers and water heaters for the expansion, which will allow the center to provide **mental health and substance abuse counseling services** both during the day and overnight.

We also partnered with **Wichita State University Technology (WSU Tech)** for their **National Institute for Culinary and Hospitality Education (NICHE)** in downtown Wichita. The ONE Gas Foundation grant will support students practicing their culinary skills on commercial natural gas stoves.

Did You Know June Is National Safety Month?

Let's Refresh on Appliance Safety!

- Natural gas appliances should be installed, moved, replaced and serviced only by a qualified professional.
- Use an appliance only for its intended purpose. For example, a natural gas range or stove should not be used to heat your home.
- Make sure nothing blocks a heater's air intake and that vents and flues are intact and unblocked to avoid the potential of carbon monoxide exposure.
- Installing a carbon monoxide detector is recommended to ensure safety.

5 to Stay Cool and Save Money this Summer Tips

1. Run dryers, dishwashers and other large appliances at night.
2. Seal doors and windows to keep cool air in and warm air out.
3. Check all vents to ensure they're open and dust-free.
4. Switch to a low-flow showerhead and install a faucet aerator to reduce water and energy usage.
5. Save energy and money by upgrading to high-efficiency natural gas appliances.
